The **SKIMMER**

Volume 46, Number 1—January 2019

SDFO NEWS

Monthly Meeting

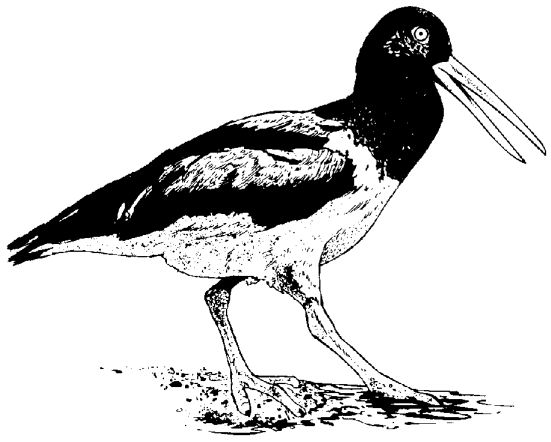
Tuesday, January 15, at 6:00 p.m., in the Hoffman Room of the San Diego Foundation Building, 2508 Historic Decatur Rd. Going south on Rosecrans St. in the Midway area of town, turn left on Roosevelt Rd. into Liberty Station and proceed a couple of blocks to Decatur. Parking is available on the street or in the adjacent parking lots.

Program: Our original intent was to hear John Martin, refuge biologist for the San Diego National Wildlife Refuge, describe conservation efforts on the refuge, but due to the government shutdown, he is unable to come. We'll schedule his talk later in the year. Instead, Tom Blackman will show photos of his recent seabird trip to the South Pacific, and Gary Nunn will have photos he took in June at Barrow, Alaska.

Next month's meeting: Wednesday, February 20, same time, same place. **Note the changed date!** Program: Another twofer: Christopher Adler will discuss birds of Borneo, and Nick Vinciguerra will talk about his work with Tricolored Blackbirds.

Pay Your 2019 SDFO Dues

If you haven't re-upped for 2019 yet, see Membership Chair Barbara Carlson at the meeting, or send her a check; contact information is on the last page.



2018 CHRISTMAS BIRD COUNTS IN SAN DIEGO COUNTY

SAN DIEGO CBC

Compiler: Justyn Stahl

The 66th San Diego CBC was held December 15th, reaching a very respectable total of **216**, best the 10-year average of 11, due to the efforts of approximately **150 participants**. Weather was cloudy early, with overnight lows around 50 degrees, then clear and calm, with a high of 68.

Thanks, as always, to San Diego Audubon Society for providing lunch (Lisa, Beth, and Carol) and help with the compilation. Paul Lehman and Guy McCaskie were invaluable sources for planning and last-minute advice on birds. Thank you especially to long-term leaders who've done the same route year after year.

Two species were new for the count this year: **Buller's Shearwater** and **Little Stint (2).**

Little Stint at the San Diego Bay salt works on the San Diego CBC. Note the finely-pointed bill and the lack of webbing (palmations) between the toes. Photo by Tuck Russell.

New high counts were set for: Ross's Goose (3), Greater White-fronted Goose (27), American White Pelican (97), Black-crowned Night-Heron (11), Allen's Hummingbird (232), Blue-gray Gnatcatcher (113), Nashville Warbler (3), Black-throated Gray Warbler (14), Western Tanager (32), and Scaly-breasted Munia (89).

Notable rarities included: Ross's Goose - 3 (a new high, Sweetwater Reservoir), Greater White-fronted Goose - 27 (a new high, Sweetwater Reservoir, Rohr Park), Cackling Goose - 2 (golf course south of Rohr Park), Eurasian Wigeon - 1 (Sweetwater River), Canvasback - 14 (Sweetwater Reservoir), White-winged Scoter - 1 (Povey boat), Black Scoter - 1 (seawatch from Seacoast Dr.), Hooded Merganser - 2 (Sweetwater Reservoir), LITTLE STINT - 2 (Salt Works, first for count), LESSER BLACK-BACKED GULL - 1 (Hotel Del Coronado, 2nd SD CBC record), BULLER'S SHEARWATER - 1 (Povey boat, first for count), Brown Booby - 5 (seawatch from Seacoast Drive, Povey boat), Reddish Egret - 1 (South San Diego Bay), Bald Eagle - 1 (Sweetwater Reservoir), Gray Flycatcher - 1 (Rohr Park), Tropical Kingbird - 2 (Balboa Park--west side, Dairy Mart main pond), THICK-BILLED KINGBIRD -1 (Poggi Creek greenbelt, its 9th winter),Western Kingbird – 1–2 (Sunset Ave. ball fields, Dairy Mart sod farm),

SCISSOR-TAILED FLYCATCHER - 2 (Nestor Park and Sunset Ave. ball fields, Poggi Creek greenbelt, second CBC record), Plumbeous Vireo - 1 (Hilltop Park), Northern Rough-winged Swallow - 3 (Sweetwater Reservoir), Vesper Sparrow - 1 (Sunset Ave. ball fields), Orchard Oriole - 2 (Tesoro Grove/ Nestor Park, Kimball Park), Hooded Oriole - 2 (Sunnyslope Park, Marston Canyon), Baltimore Oriole - 2 (Rohr Park, Tesoro Grove/Nestor Park), Black-and-white Warbler - 1 (Balboa Park--28th St. Park), Nashville Warbler - 3 (Sweetwater River, Spruce Canyon, Kimball Park), American Redstart - 1 (Tesoro Grove/Nestor Park), Pine Warbler - 1 (Coronado - Margarita at 6th Ave.), and Black-throated Green Warbler - 1 (Greenwood Cemetery).

Other "low end" rarity totals, followed by 10-year average, included: Yellow Warbler (12/9), Black-throated Gray Warbler (14/7), Wilson's Warbler (6/6.6), Summer Tanager (6/6.5), Western Tanager (32/14), and Bullock's Oriole (17/9.9).

General comments on a select species: Waterfowl numbers were generally below 10-year averages, with Lesser Scaup and Northern Pintail particularly down (33% normal). California Quail hangs on in the count circle, with 3 reported. Pacific Loons were well below their 10-year mark of 320, with just 59 seen. Dunlin, Short-billed Dowitcher, and Ruddy Turnstone all showed less than half-normal counts. Cassin's Auklet was observed for the first time since 1990! Heermann's Gull numbers continue to decline, with 178 down from the 10-year average of 545, likely owing to multi-year breeding failure in Mexico. White-breasted Nuthatch had a great showing with 15 (average 2.8). Despite reports of low landbird numbers, the following species were at or near-average: Ruby-crowned Kinglet, Orange-crowned Warbler, Yellow-rumped Warbler, Chipping Sparrow, Dark-eyed Junco, White-crowned Sparrow, Golden-crowned Sparrow, and Brown-headed Cowbird. The following species were notably down: Townsend's Warbler, Savannah Sparrow, Song Sparrow, and California Towhee (all 75% normal), and Brewer's Blackbird (only 50% average). A few were notably up: American Robin, American Pipit, and Cedar Waxwing. So, all in all, landbirds seems to be fine…?

Invading species were not invading this year, as only 1 Red-breasted Nuthatch was reported, and no Mountain Bluebirds, Pine Siskins, or Lawrence's Goldfinches were recorded in the count circle.

Harris's Sparrow at Sabre Springs on the Rancho Santa Fe CBC. Photo by Lisa Ruby.

The Anza Team, Anza-Borrego CBC (l. to r.): Tom Blackman, Suzanne Schmidt, Valerie Collins, Ann Keenan, Richard and Mary Yates. Photo by Susan Gilliland.

Non-countable exotics included the long-staying, presumed escapee American Flamingo, Red-masked Parakeet (a new high of 7), Black-throated Magpie-Jay (8), and perhaps one to watch: Pin-tailed Whydah (3).

Pacific Golden-Plover was likely present but not seen near the Tijuana River mouth. Great Horned Owl was a rather embarrassing miss this year. A Verdin was unable to be found during count week, but reappeared shortly after near the Sunset Ave. ballfields. Likely present, but the tides weren't right, a Nelson's Sparrow was seen earlier in the month along Seacoast Dr.

Palm Warbler was the only true count week bird not seen on the count, with one found the following day in Manzanita Canyon. Given one of the better falls for this species in San Diego, this was a tough miss.

ANZA-BORREGO CBC

Compiler: Robert Theriault

The Anza-Borrego Desert CBC has not yet been compiled, but pleasant weather was enjoyed by about 90 participants who recorded about 118 species.

Unexpected species (not found on the checklist) included Greater White-fronted Goose, Canvasback, Plumbeous Vireo, Summer Tanager and Bullock's Oriole. Photos were taken of a possible bunting (*Passerina*) hybrid - a decision on this is yet to be made!

Unusual subspecies were a yellow-shafted Northern Flicker and a Slate-colored Junco.

Sagebrush and Bell's (subspecies *canescens*) Sparrow

fall into the difficult-to-identify category, but good photos were taken of them.

Both of our notorious to find thrashers, Crissal and Le-Conte's did not escape detection on count day.

Unfortunately, since we do not have a tally for the total number of birds reported yet, we cannot comment on overall population trends.

Nonetheless, it was an interesting day in the desert, with everything from a number of waterfowl, to Long-eared Owl, to Scott's Oriole being noted.

Crissal Thrasher, location not recorded, Anza-Borrego CBC. Photo by Robert Theriault.

I received special help this year in obtaining permission to bird on private property. Volunteers once again offered everyone a complimentary and delicious lunch at the Steele/Burnand Anza-Borrego Desert Research Center to cap of the day of birding. Thanks to everyone involved during the day!

LAKE HENSHAW CBC

Compiler: Gretchen Cummings

We had 14 groups covering the Lake Henshaw CBC on 17 December with a total of 33 participants. A total of 124 species were seen. Three of those species were considered unusual. Those three species were 12 Greater White-fronted Geese, 1 Cackling Goose, and 1 Short-eared Owl. All three were seen at the Lake itself.

SOUTH END SALTON SEA CBC

Compiler: Adam Searcy

31 participants braved temperatures of 45 to 70 degrees F, clear skies, and no wind on 17th December 2018's SESS CBC. They detected 154 species including some unusual species such as Surf Scoter, Barrow's Goldeneye, Horned Grebe, Solitary Sandpiper, and Harris's Sparrow.

RANCHO SANTA FE CBC

Compiler: Robert Patton

Thanks to all who participated in the 39 groups covering the 22 December 2018 Rancho Santa Fe area Christmas Bird Count. Preliminary results indicate 187 species recorded (plus 3 subspecies, a hybrid, and 2 additional species seen count week but not on the day of the count); below our previous maximum count of 202 species but above our average of 174. Notable species reported (pending review) included Cackling Geese in Fairbanks Ranch pastures and at San Dieguito Reservoir, a Wood Duck in Poway, male Eurasian

American Redstart at Lake Hodges on the Rancho Santa Fe CBC. Photo by Charles Jackson.

Wigeon at San Elijo Lagoon, a hybrid American-Eurasian Wigeon at San Dieguito Lagoon, Canvasback and Hooded Mergansers at multiple locations, Common Goldeneye in Poway and at Lake Miramar, a Horned Grebe in San Dieguito Lagoon, a Brown Booby off Cardiff, a Buller's Shearwater off Torrey Pines, Least Bittern at San Dieguito Reservoir and at Lake Miramar, an adult Reddish Egret and adult Yellow-crowned Night-Heron at San Dieguito Lagoon, a juvenile Reddish Egret at San Elijo Lagoon, a Zone-tailed Hawk over Felicita Park, Red Phalarope off Torrey Pines, first-cycle Glaucous-winged Full at Lake Miramar, Caspian tern and Cassin's Auklet off Torrey Pines, Pomarine and Parasitic Jaegers off Torrey Pines and Cardiff, Red-naped Sapsucker in Harmony Grove, a Pacific-slope Flycatcher at San Diego Botanical Gardens, Barn Swallows at Torrey Pines and at San Dieguito Lagoon, Mountain Chickadees in Harmony Grove and Encinitas, Red-breasted Nuthatch at Harmony Grove, Yellow Warblers in Encinitas and at Felicita Park, Myrtle (Yellow-rumped) Warblers in Encinitas and at Penasquitos Canyon, Palm Warbler and Northern Waterthrush in San Dieguito River valley, Hermit Warbler at SD Botanical Garden, American Redstart at Lake Hodges, Painted Redstart in Encinitas, Wilson's Warblers at SD Botanical Gardens and Olivenhain, Western Tanagers in Encinitas, SD Botanical Gardens, and Penasquitos Canyon, Green-tailed Towhee in Cardiff, a Nelson's sparrow and Large-billed Savannah Sparrow at San Elijo Lagoon, a Harris' Sparrow in Saber Springs, a White-throated Sparrow in Olivenhain, Orchard Oriole at SD Botanical Gardens, Bullock's Orioles at SD Botanical Gardens and in the Sun Valley area of Solana Beach, Purple Finches in Rancho Penasquitos, and Pin-tailed Whydah in Penasquitos Canyon.

OCEANSIDE CBC

Compilers: Jane Mygatt, Tim Burr, and Kirsten Winter

The 73rd Oceanside Christmas Bird Count was held on December 29, 2018. It was a clear and cold day, with breezes in the morning. Temperatures ranged from 29 degrees F in the morning to about 60 degrees in the afternoon. A talented group of 123 birders logged 231 hours and 451 miles, and recorded approximately 29,100 individual birds—detecting birds at a rate of about 125 birds per hour. The total number of individual birds counted was down by about 6,000 or approximately 17% when compared with last year, possibly due to the recurring drought. Thank you to all of the team participants, and to the volunteers at the Buena Vista Audubon Nature Center who hosted the post-count lunch and compilation!

A total of 186 species was detected, which is about average for this count. The count record of 200 species was set some years ago. The most numerous bird was Yellow-rumped Warbler at 2671 individuals,

showing its adaptability to various habitats and food sources. Other very numerous species included American Coot at 1993, American Wigeon at 1791, and American Crow at 1446 individuals.

Black-and-white Warbler at Holiday Park, Oceanside CBC. Photo by Peter Thomas.

Many rarities were detected. A Burrowing Owl was detected by Andy Mauro and team at the fallow fields near Legoland. Phil Unitt mentioned that this species was once a resident in the Oceanside CBC area, but is now present only as a rare winter migrant. Other rarities included a Chestnut-sided Warbler seen by Chris Smith and team at Batiquitos Lagoon, a female Common Goldeneye discovered by John Haddock and team at Whelan Lake, and Black-and-white Warblers seen by Kathy Aldern and Maryanne Bache at Seascape Dr., and by Peter and Millie Thomas at Holiday Park. A juvenile Bald Eagle was spotted by Justyn Stahl near the San Luis Rey Mission, and by Jeff Wells near North River Rd. The eagle had blue patagial tags indicating it was from the northern Channel Islands, where Bald Eagles have been reintroduced. Carol and Fred Roberts found a Purple Finch at Alta Vista Park. A Summer Tanager was seen by Rick Grove and team at Green Oaks Ranch in Vista, and a Western Tanager was spotted at Buddy Todd Park by Tito Gonzales. Paul Lehman (roving) located a Palm Warbler, Nashville Warbler, Western Tanager, Summer Tanager, and Bullock's Oriole .

Hooded Mergansers at Aviara Golf Course, on the Oceanside CBC. Photo by Stevan Brad

Many other species that are rarely found in the Oceanside circle were detected as single birds or as very few individuals, including Prairie Falcon and Cactus Wren (Robert Patton, Camp Pendleton); Reddish Egret (Tim Burr, Camp Pen west); Hooded Merganser (Stevan Brad, Batiquitos/Aviara), Ridgway's Rail (Chris Smith, Batiquitos), Pomarine Jaeger (Dave Povey, Pelagic), Wilson's Snipe (Stan Walens, La Costa; Paul Chad, Fire Mt; and Paul Lehman,

roving), and Canyon Wren (Carol Manning, Gopher Canyon South).

Very few species were detected at record high numbers. White-breasted Nuthatch set a record high with 20 individuals, and the two Brown Boobies were a record high for this species, which appeared for only the third time on this count. Dark-eyed Juncos (94) were at record high numbers. Peregrine Falcon (6) matched its previous high count. Bald Eagle (1) was present for only the third time on this count.

Several species were at or near record lows, including Loggerhead Shrike which had just 4 detections, all at Camp Pendleton. Bonaparte's Gull, Herring Gull, and Forster's Tern, at one individual each, set record lows. Barn Owl and Costa's Hummingbird, also at one individual each, were at record lows. Brewer's Blackbird (31) was near the record low of 30 individuals set in 1947.

Returning from last year, two of our 34 survey teams featured young birders. Ryan Andrews led a young birder team at Agua Hedionda, and they located rarities including Brant and Cackling Goose. Jeff Wells led a team at Oceanside Golf Course/Libby Lake that included his young son, and they found a juvenile Bald Eagle and a Pacific Slope Flycatcher. Thanks to these two teams who are helping to build the future of birding in our area!

Thanks very much to all of the teams who worked many hours to collect these data. Christmas bird counts generate an important and long-running data set. These data help to track bird species trends for the United States and other countries. Thank you for your very important contributions to this effort.

ESCONDIDO CBC

Compiler: Kenneth Weaver

The Escondido CBC was held on January 5. We recorded 150 species, a little below the previous ten-year average of 154.

Only four species were noted that were recorded on fewer than ten previous counts. Our sole new species was a Sagebrush Sparrow observed in Ramona by Jay Desgrosellier and Courtny Achenbach. Jay has previously commented on this sighting. This brings our total number of species recorded in this count circle to 235. Other species with fewer than ten previous records include: Clark's Grebe, six on Lake Wohlford, actually being regularly reported in recent years. Harris's Hawk near the Ramona Airport, also noted on last year's CBC and intermittently since. White-winged Dove, a total of twenty-five noted by three teams covering northeast Ramona, the Ramona Airport, and the east end of the San Pasqual Valley. This is our third straight year of recording this species which appears to be expanding its range. Cedar Waxwings, Western Bluebirds, Hermit Thrushes, and American Robins occurred in above average numbers, but many songbirds were in notably low numbers. Thirty Hooded Mergansers constituted a new high count.

I also note the following species that were recorded on this year's Escondido CBC that were not listed on the 2017 San Diego CBC: Ross's Goose, Wood Duck, Common Mergasner, Golden Eagle, Bald Eagle (I know of one on this year's SD count), Ferruginous Hawk, Western Screech-Owl, White-throated Swift, Red-breasted Sapsucker, Mountain Chickadee, Canyon Wren, Mountain Bluebird, Bell's Sparrow, Vesper Sparrow, Scott's Oriole, and Purple Finch.

ADDITIONAL SIGHTINGS

DECEMBER 2018

Compiled by Sara Baase Mayers

This section focuses on several areas not in the CBC circles. It also includes some birds not present on the count day for their location. It is not as complete as the usual monthly reports. Species on the CBRC review list are in bold.

La Jolla: Seawatch at Pt. La Jolla produced a Black Scoter on 1 Dec (MS), two Ancient Murrelets the same day (GN), and a Buller's Shearwater on 2 Dec (GN). The latter is rarely seen in winter and from shore. A visit to La Jolla's Doyle Community Park and neighborhoods nearby on 7 Dec (PEL) turned up an adult dark-lored White-crowned Sparrow, very rare along the coast (last reported on 11 Dec, *eBird*); a White-throated Sparrow; a male Baltimore Oriole; and a Tennessee Warbler. (A total of nine White-throated Sparrows were reported in the county this month, with several wintering in the yards of birders.) A female Hepatic Tanager present last winter at Villa La Jolla Park was there this year 28 Nov-1 Dec (AA, BLC).

Kendall-Frost Marsh/ Crown Point: A male Eurasian Wigeon was at the Kendall-Frost Marsh in Mission Bay 8 Nov-21 Dec (JB, *eBird*). A **Tricolored Heron** there 25 Dec (MH) is likely the same bird that frequents Famosa Slough and the San Diego River mouth. Sage Thrashers are rare in the county in December and particularly near the coast; one was at the marsh 23-29 Dec (JH, *eBird*). A Clay-colored Sparrow was photographed nearby on Crown Point on 31 Dec (JP). High tides again brought up a Nelson's Sparrow near the marsh observation platform 22-24 Dec (JR, *eBird*). A Northern Waterthrush was also there 23-24 Dec (EH, *eBird*).

Point Loma: A Red-necked Grebe returned for a second winter to San Diego Bay just off Shelter Island and was present 11 Nov-31 Dec+ (DL, *eBird*). A Reddish Egret and a **Tricolored Heron** have been frequenting the San Diego River mouth area and nearby Famosa Slough since 23 Mar (ML) and 19 Nov (SBM), respectively; both continue. A Tropical Kingbird was near Famosa Slough on 1 Dec (PEL). A Palm Warbler was photographed near the San Diego River mouth 29 Dec (MW).

Coronado: A Scissor-tailed Flycatcher was photographed in Coronado on 23 Dec (MT). It may be the same bird seen in Coronado 1-12 Nov (NF, JG).

Mountains: On 2 Dec, 85 Pinyon Jays were still present in the Laguna Mountains (SF). The flock, first reported on 3 Oct, included at least 250 birds (NC, RA). Up to 20 Clark's Nutcrackers were in the vicinity of Big Laguna Lake 6 Oct-21 Dec (TG, RW-E, *eBird*). Oddly, one Pinyon Jay was in the Eastlake neighborhood of Chula Vista 1-24 Dec (MB).

Clay-colored Sparrow at Crown Point, Mission Bay. Photo by Jim Pawlicki.

Lake Murray: A White-winged Scoter was on Lake Murray, near the dam, 24 Nov-3 Dec (BR, MM); there was only one previous inland record in the county at the time of the *San Diego County Bird Atlas*. The trees near the lake's boat dock attracted a Tennessee Warbler 9-18 Dec (JS, *eBird*); a Nashville Warbler 2-14 Dec (JS, *eBird*); and a Palm Warbler 2-21 Dec (BR, JS, *eBird*).

The Escondido count circle: A male Eurasian Wigeon was at Rangeland Road in Ramona 27-29 Dec (GCH, *eBird*). An adult Harris's Hawk in Ramona 6-27 Dec (NC, *eBird*) has been present for two or three years. An adult Zone-tailed Hawk continues at the San Diego Zoo Safari Park and vicinity 12 Aug-30 Dec (SF, LR). Kit Carson Park in Escondido had a Pacific-slope Flycatcher, rare in winter, on 30 Dec (PEL). A Baltimore Oriole was in a neighborhood near the park on 30 Dec (PEL).

Tijuana River Valley: A Plumbeous Vireo at the Sunset Avenue ball fields 26 Nov-18 Dec (DJ, CZ) and a Verdin frequenting tree tobacco plants nearby 21 Nov-22 Dec (JS, PC) were both unseen on the count day. An immature male Orchard Oriole was photographed at the Tijuana River NWR Visitor Center in Imperial Beach on 2 Dec (JC). The Northern Waterthrush wintering at the Dairy Mart "stick pond" since 16 Sep was last seen on 10 Dec (DJ, *eBird*).

Miscellaneous: Townsend's Solitaires are rare visitors to San Diego's mountains and rarer in the coastal lowlands; one was at Buddy Todd Park in Oceanside 7 Nov-15 Dec (SES, *eBird*). A **Grace's Warbler** was in Encinitas 7-18 Dec (SES). A Rose-breasted Grosbeak came back for a second winter in West Shepherd Canyon in the Tierrasanta neighborhood of San Diego 14-24 Dec (PEL).
